

SOLAR PV · ENERGY STORAGE · EV CHARGING

Built for **Kenya**. Engineered to last.

Four standardised packages on one modular hardware platform. Designed, installed, and maintained by the same regional engineering team, with a five-year EPC and O&M commitment on every install.

WHO WE ARE

An engineering company that intends to still be servicing its first installations in 2045.

Precifarm AI Ltd is an EPRA-licensed EPC and O&M contractor delivering distributed solar PV and lithium energy storage systems across Kenya. We size every system against a written load assessment, install with our own crews from regional hubs in six cities, and carry a five-year service commitment on every deployment.

We stay after the install.

Solar should not be transactional. The team that designs your system is the team that services it. No subcontractor we never see again.

EPC and O&M as one obligation.

Engineering, procurement, construction, operations, and maintenance live in the same team. Most Kenyan installers sell EPC and walk away. We do not.

We grow on revenue, not capital.

No outside investors. No five-year plan that depends on someone else writing a cheque. We answer to the customers who pay our bills.

PACKAGE	CAPACITY	BEST FOR	PRICING
Starter	550 W · 1.5 kWh	Single-room homes, kiosks, renters, boda riders	KSh 95,000 cash, or KSh 5,472/month
Family	2.2 kWp · 5 kWh	Two to three bedroom off-grid homes seeking reliable full-day power	KSh 290,000 cash
Commercial	From 2.75 kWp · 15 kWh	Schools, clinics, SMEs, cooperatives, irrigation farms	On quotation basis

PACKAGE	CAPACITY	BEST FOR	PRICING
Commercial Plus EV-READY	50 kWp to 1 MWp · 100 kWh to 2 MWh storage	EV-ready mini-grids, industrial sites, fleets, campuses	On quotation basis

STARTER PACKAGE

Precifarm Starter

Independence from blackouts.

BEST FOR

Single-room homes, kiosks, renters, boda riders

CAPACITY

550 W · 1.5 kWh

INVERTER

1.5 kW hybrid

SERVICE TIER

Standard

DAILY LOAD

Approximately 0.6 kWh per day. Lights, Wi-Fi, TV, fans, phone charging.

PANELS

1 × 550 W

WARRANTY

One-year workmanship warranty

What it powers

Up to 10 LED bulbs, 1 TV, Wi-Fi router, phone charging, and 1 small fan (8 to 12 hours per day depending on usage).

Irrigation support

Up to 1 acre of irrigation water supply (approximately 10,000 litres per day).

Irrigation pump is not included in the package.

What you get

- One 550 W solar panel with mounting hardware
- Neura Pod 1 lithium storage (1.5 kWh)
- 1.5 kW hybrid inverter, wall-mounted

- LED lighting circuit, phone and small-appliance sockets
- EPRA-licensed installation, typically same-day
- One-year workmanship warranty

STARTING

KSh 95,000 cash, or KSh 5,472/month

KSh 5,472 per month over 24 months on Lipa Pole Pole (KSh 12,500 deposit).

COMMITMENT

**Five-year EPC +
O&M**

FAMILY PACKAGE

Precifarm Family

Off-grid 2 to 3 bedroom homes. Zero KPLC bills.

BEST FOR

Two to three bedroom off-grid homes seeking reliable full-day power

CAPACITY

2.2 kWp · 5 kWh

INVERTER

5 kW hybrid

SERVICE TIER

Standard

DAILY LOAD

Approximately 5 to 6 kWh per day. Fridge, full LED lighting, entertainment, Wi-Fi, fans, and small appliances.

PANELS

4 × 550 W (expandable)

WARRANTY

One-year workmanship warranty

What it powers

10 to 20 LED bulbs across the home, 1 energy-efficient fridge, 1 TV, Wi-Fi router, 2 to 3 fans, phone charging, and small appliances (used at different times).

Irrigation support

Up to 2 acres of irrigation water supply (approximately 25,000 litres per day).

Irrigation pump is not included in the package.

What you get

- Two 450 W solar panels, mounted on roof or ground frame
- Neura Pod 5 lithium storage (5 kWh, expandable)

- 5 kW hybrid inverter
- Whole-home wiring with dedicated circuits for fridge, lighting, and outlets
- EPRA-licensed installation, typically one to two days
- One-year workmanship warranty

STARTING

KSh 290,000 cash

Bank financing customer-arranged via Equity, KCB, Co-op Bank, or SACCO partners.

COMMITMENT

**Five-year EPC +
O&M**

COMMERCIAL PACKAGE

Precifarm Commercial

Solar that runs your operation.

BEST FOR

Schools, clinics, SMEs, cooperatives, irrigation farms

CAPACITY

From 2.75 kWp · 15 kWh

DAILY LOAD

Approximately 28 kWh per day typical.
Cold storage, milling, lodges, clinic loads,
irrigation across 5 to 45 acres with pumps
up to 3 km from source.

INVERTER

From 10 kVA, scalable to 12 kW Deye
hybrid

PANELS

From 5 × 550 W up to 24 × 550 W

SERVICE TIER

Priority, on-site

WARRANTY

One-year workmanship warranty

What it powers

Multi-room lighting systems, refrigeration (clinics and shops), water pumping systems, milling or processing equipment, and productive farm or enterprise loads.

Irrigation support

Designed for 5 to 45 acres depending on site energy requirements and system configuration.

Irrigation pump is not included unless specified in the project scope.

What you get

- Solar array sized 2.75 kWp to 13.2 kWp against your measured load

- Neura Pod 15 lithium storage (15 kWh, expandable)
- Hybrid inverter from 10 kVA, scalable to 12 kW Deye
- Borehole or process integration where required
- Three-phase compatibility for milling and cold-storage loads
- EPRA-licensed installation, sequenced to avoid operational disruption

PRICING

On quotation basis

COMMITMENT

Five-year EPC + O&M

COMMERCIAL PLUS PACKAGE · EV-READY

Precifarm Commercial Plus

Sub-megawatt solar, lithium storage, and EV charging delivered as one integrated EPC and O&M contract.

BEST FOR

EV-ready mini-grids, industrial sites, fleets, campuses

CAPACITY

50 kWp to 1 MWp · 100 kWh to 2 MWh storage

INVERTER

Sized per deployment, hybrid configuration

SERVICE TIER

Priority, on-site

DAILY LOAD

Highly variable by deployment archetype: institutional anchor sites typically run classroom, clinic, and cooperative loads plus 2-4 AC charging points; fleet hubs run continuous DC fast-charge or battery-swap rotations; industrial sites smooth peak draw against grid limits while charging delivery vehicles overnight.

PANELS

From 90 × 550 W up to ~1,800 × 550 W

WARRANTY

One-year workmanship warranty

What it powers

Large facilities, workshops, agro-processing units, cold storage clusters, ICT systems, and EV charging infrastructure (multi-point charging possible).

What you get

- Solar array sized 50 kWp to 1 MWp against site demand
- Lithium storage from 100 kWh to 2 MWh
- AC and DC charging points configured to deployment archetype

- Hybrid inverter sized per deployment, three-phase
- Grid-interactive design where utility connection is available
- EPRA-licensed installation sequenced around site operations

PRICING

On quotation basis

COMMITMENT

Five-year EPC + O&M

SOLAR IRRIGATION SYSTEMS

Solar-powered irrigation, engineered for every acre of Kenyan farmland.

Precision-engineered solar pumping systems sized from 1-acre smallholder plots to 100+ acre commercial farms. Submersible borehole pumps, surface centrifugal pumps, and solar pump controllers, specified against the measured water requirement, head, and irrigation schedule of each site.

Standard sizing range

- **Smallholder (1 to 4 acres)** — approximately 10,000 to 40,000 litres per day. Submersible or surface pump depending on water source.
- **Medium farm (5 to 45 acres)** — approximately 50,000 to 450,000 litres per day. Hybrid PV with storage for irrigation outside daylight hours.
- **Commercial (45 to 100+ acres)** — bespoke design against the irrigation plan, water source, and crop schedule. Multi-pump arrangements where required.

Hardware family

- Stainless-steel submersible borehole pumps for boreholes of varying depth
- Surface centrifugal pumps for shallow lift and pressure boosting
- Dedicated solar pump controllers (PV-direct or hybrid with storage)
- Brand selection by availability, warranty support in Kenya, and operating profile of the site

EPRA T1, T2, T3 TECHNICIAN TRAINING

Practitioner-led training for solar PV technicians and engineers.

A short-cohort programme that prepares technicians and engineers for the EPRA T1, T2, or T3 solar PV licence application. Curriculum mapped to the EPRA classification and the NITA solar PV competency framework. Delivered by the same field team that designs and operates Precifarm's Commercial and Commercial Plus installations.

TIER	SYSTEM SCOPE	BEST FOR
T1	Small DC systems up to 100 Wp	Entry technicians, vendors, last-mile distributors
T2	Medium systems with multiple batteries and inverters	Practising installers, electricians moving into solar
T3 (Grid Tie / Hybrid)	Advanced grid-tied and hybrid PV systems	Senior installers, design engineers, project leads

What every cohort covers

- **Design** — site-sized engineering, not catalogue picking. Load assessment, irradiance estimation, sizing methodology.
- **Install** — mechanical, electrical, and safety to the standard the EPRA inspector expects on site.
- **Operate** — commissioning reports, fault diagnosis, warranty handling.
- **Licence** — application pathway to EPRA T1, T2, or T3, including documentation preparation.

HOW WE WORK

From site audit to year-five service, on one engineering team.

Every Precifarm install moves through the same four-stage process, delivered by the regional engineering team responsible for your area. No subcontractors, no handoffs at year one.

1

Site audit

We dispatch an engineer to evaluate your roof structure, analyse your exact load requirements, and map your daily energy routine.

2

Custom engineering

We size your solar array, lithium storage, and inverter capacity precisely. You receive a written design and bill of quantities before any commitment.

3

Professional installation

Deployed by EPRA-licensed crews with all hardware on-site. Residential installs typically complete same-day; commercial sites are sequenced to avoid operational disruption.

4

Five-year service

Scheduled preventive maintenance, fault response from your regional depot, warranty management handled by us. The same team across all five years.
